

COMPREHENSIVE CARE MODEL FOR RURAL HEALTH: SUMAPAZ LOCALITY (BOGOTÁ, COLOMBIA).

MILENA BAUTISTA
GÓMEZ, PhD.

Sumapaz

OBJECTIVES

General objective:

Generate new knowledge about social innovation in health in the Latin America and Caribbean region through the documentation of innovative solutions that contribute to a more inclusive, affordable and effective health care.

Specific objectives:

- Describe the innovative solution in health, in terms of components, strategies and the implementation process.
- Understand the role of the innovative organization and the links that it establishes with the social and health system.
- Extract lessons learned from social innovations in health with possibilities of replicability and scalability to other health systems.

METHODOLOGY

RESEARCH DESIGN

- Qualitative research
- Ethnographic techniques
- Fieldwork performed (November 08-21 /2019)
(February 01–10/2020)

DATA COLLECTION

- Grey Literature
- Open interviews with beneficiaries and the implementation team
- Discussion group with innovation leaders
- Field Journals about participant observation
- Photo and audio records

CATEGORIES OF ANALYSIS

- Context
 - Solution
 - Innovator
 - Sustainability, replicability and scalability
 - Key lessons
- 
- A decorative graphic in the bottom right corner consisting of overlapping curved shapes in green, orange, and grey.

CONTEXT

Colombia (South America):

- Medium-income country
- High levels of inequality between urban and rural areas
- Inequality of health

Sumapaz (rural locality in Bogotá) faces challenges including:

- Violence
- Barriers to access to rural territory
- Illnesses related to agricultural work
- Limited health infrastructure

COMPREHENSIVE CARE MODEL FOR RURAL HEALTH: SUMAPAZ LOCALITY (BOGOTÁ, COLOMBIA)

- In 2001 the model was created by Nazareth Hospital (currently named Subred Sur). This is the public health institution of Sumapaz District.
- The model was created based on a very precise interpretation of the health needs of the rural population of Sumapaz, with the aim of ensuring access to health for the farming population.

“Health is a state of complete physical, mental, spiritual, emotional and social well-being, and not merely the absence of disease or infirmity”

(Subred Sur, 2016:7)

Components	Strategies	Results
Community participation	10 networks of community participation	- Health quality recognition - Decreased mortality and morbidity - Decreased barriers to access - Generation of new knowledge - Empowerment - Creation of value for communities
Inclusive and holistic health	- Home visits - Health routes	
Food safety and natural medicine	Chaqué Park: public health park	

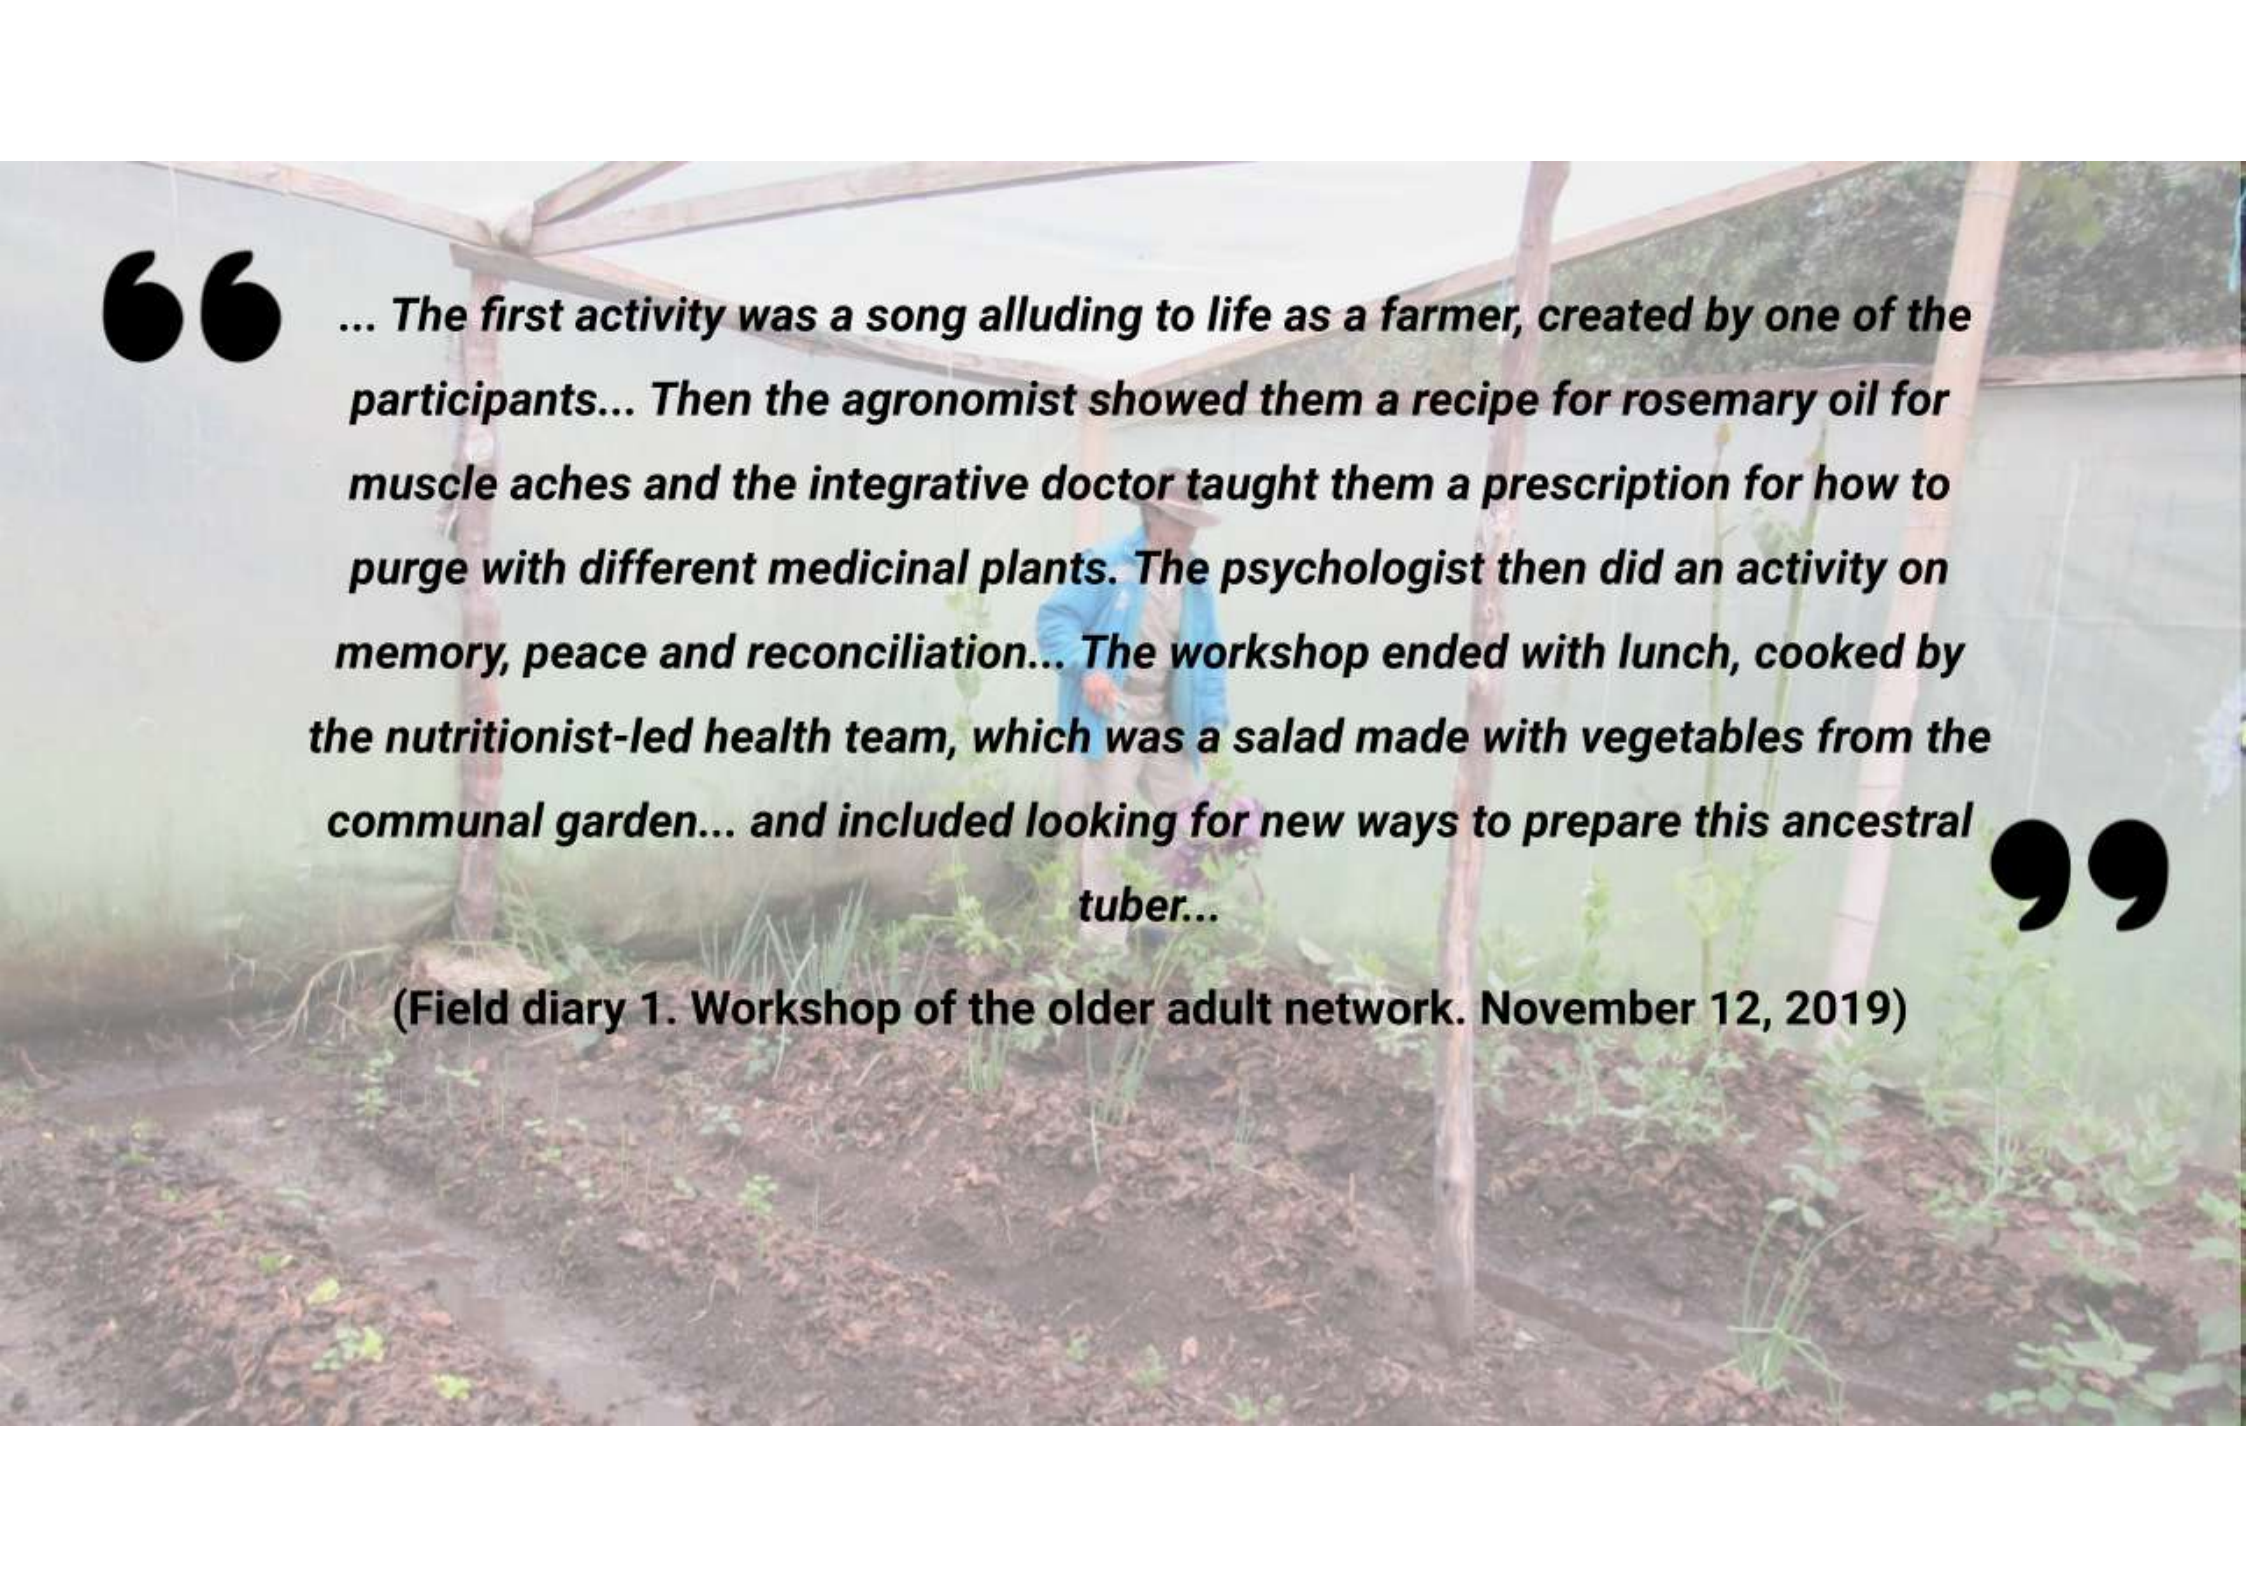

1. THE SOLUTION

1.1 Community participation

- Knowledge exchange
- Identification of needs
- Community education

A person wearing a blue jacket and a hat is working in a garden. They are standing under a wooden trellis structure that is covered with a translucent plastic sheet. The ground is dark and appears to be mulched or covered with soil. There are some green plants growing in the garden. The background is slightly blurred, showing more of the garden and the trellis structure.

“

... The first activity was a song alluding to life as a farmer, created by one of the participants... Then the agronomist showed them a recipe for rosemary oil for muscle aches and the integrative doctor taught them a prescription for how to purge with different medicinal plants. The psychologist then did an activity on memory, peace and reconciliation... The workshop ended with lunch, cooked by the nutritionist-led health team, which was a salad made with vegetables from the communal garden... and included looking for new ways to prepare this ancestral tuber...

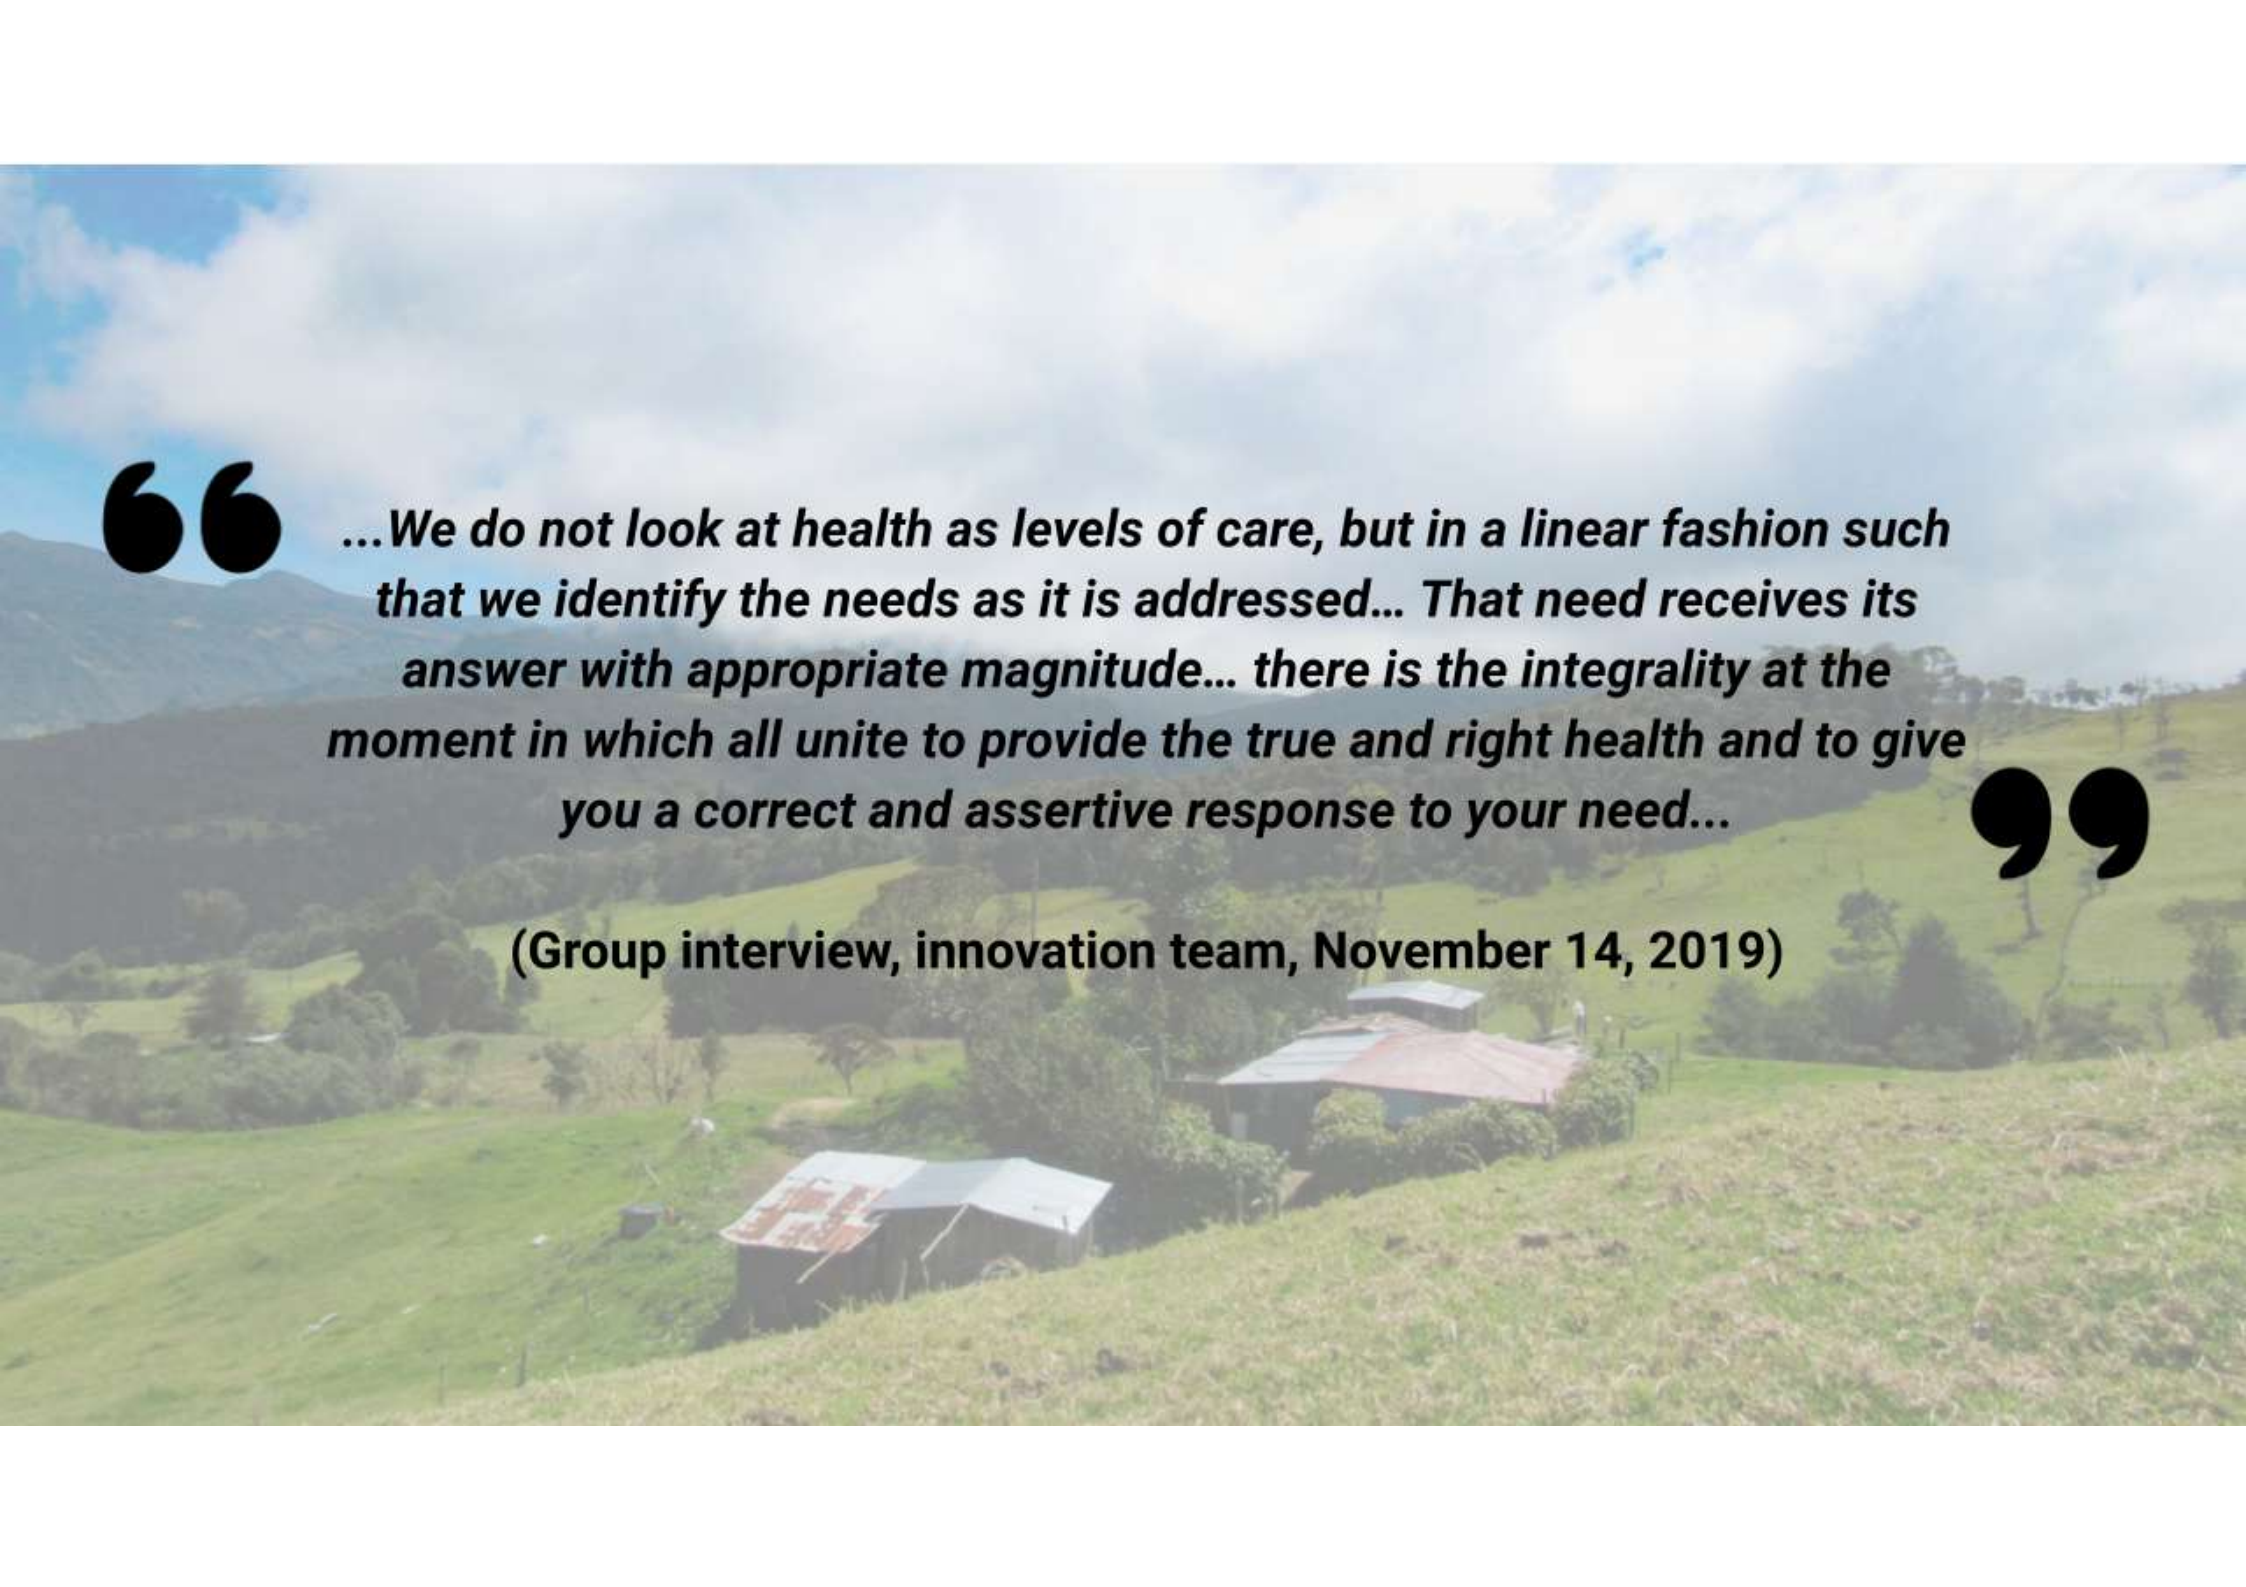

”

(Field diary 1. Workshop of the older adult network. November 12, 2019)

1.2. Inclusive and holistic health

- One-health approach
- Inclusive strategies
- Interinstitutional management

“

...We do not look at health as levels of care, but in a linear fashion such that we identify the needs as it is addressed... That need receives its answer with appropriate magnitude... there is the integrality at the moment in which all unite to provide the true and right health and to give you a correct and assertive response to your need...

”

(Group interview, innovation team, November 14, 2019)

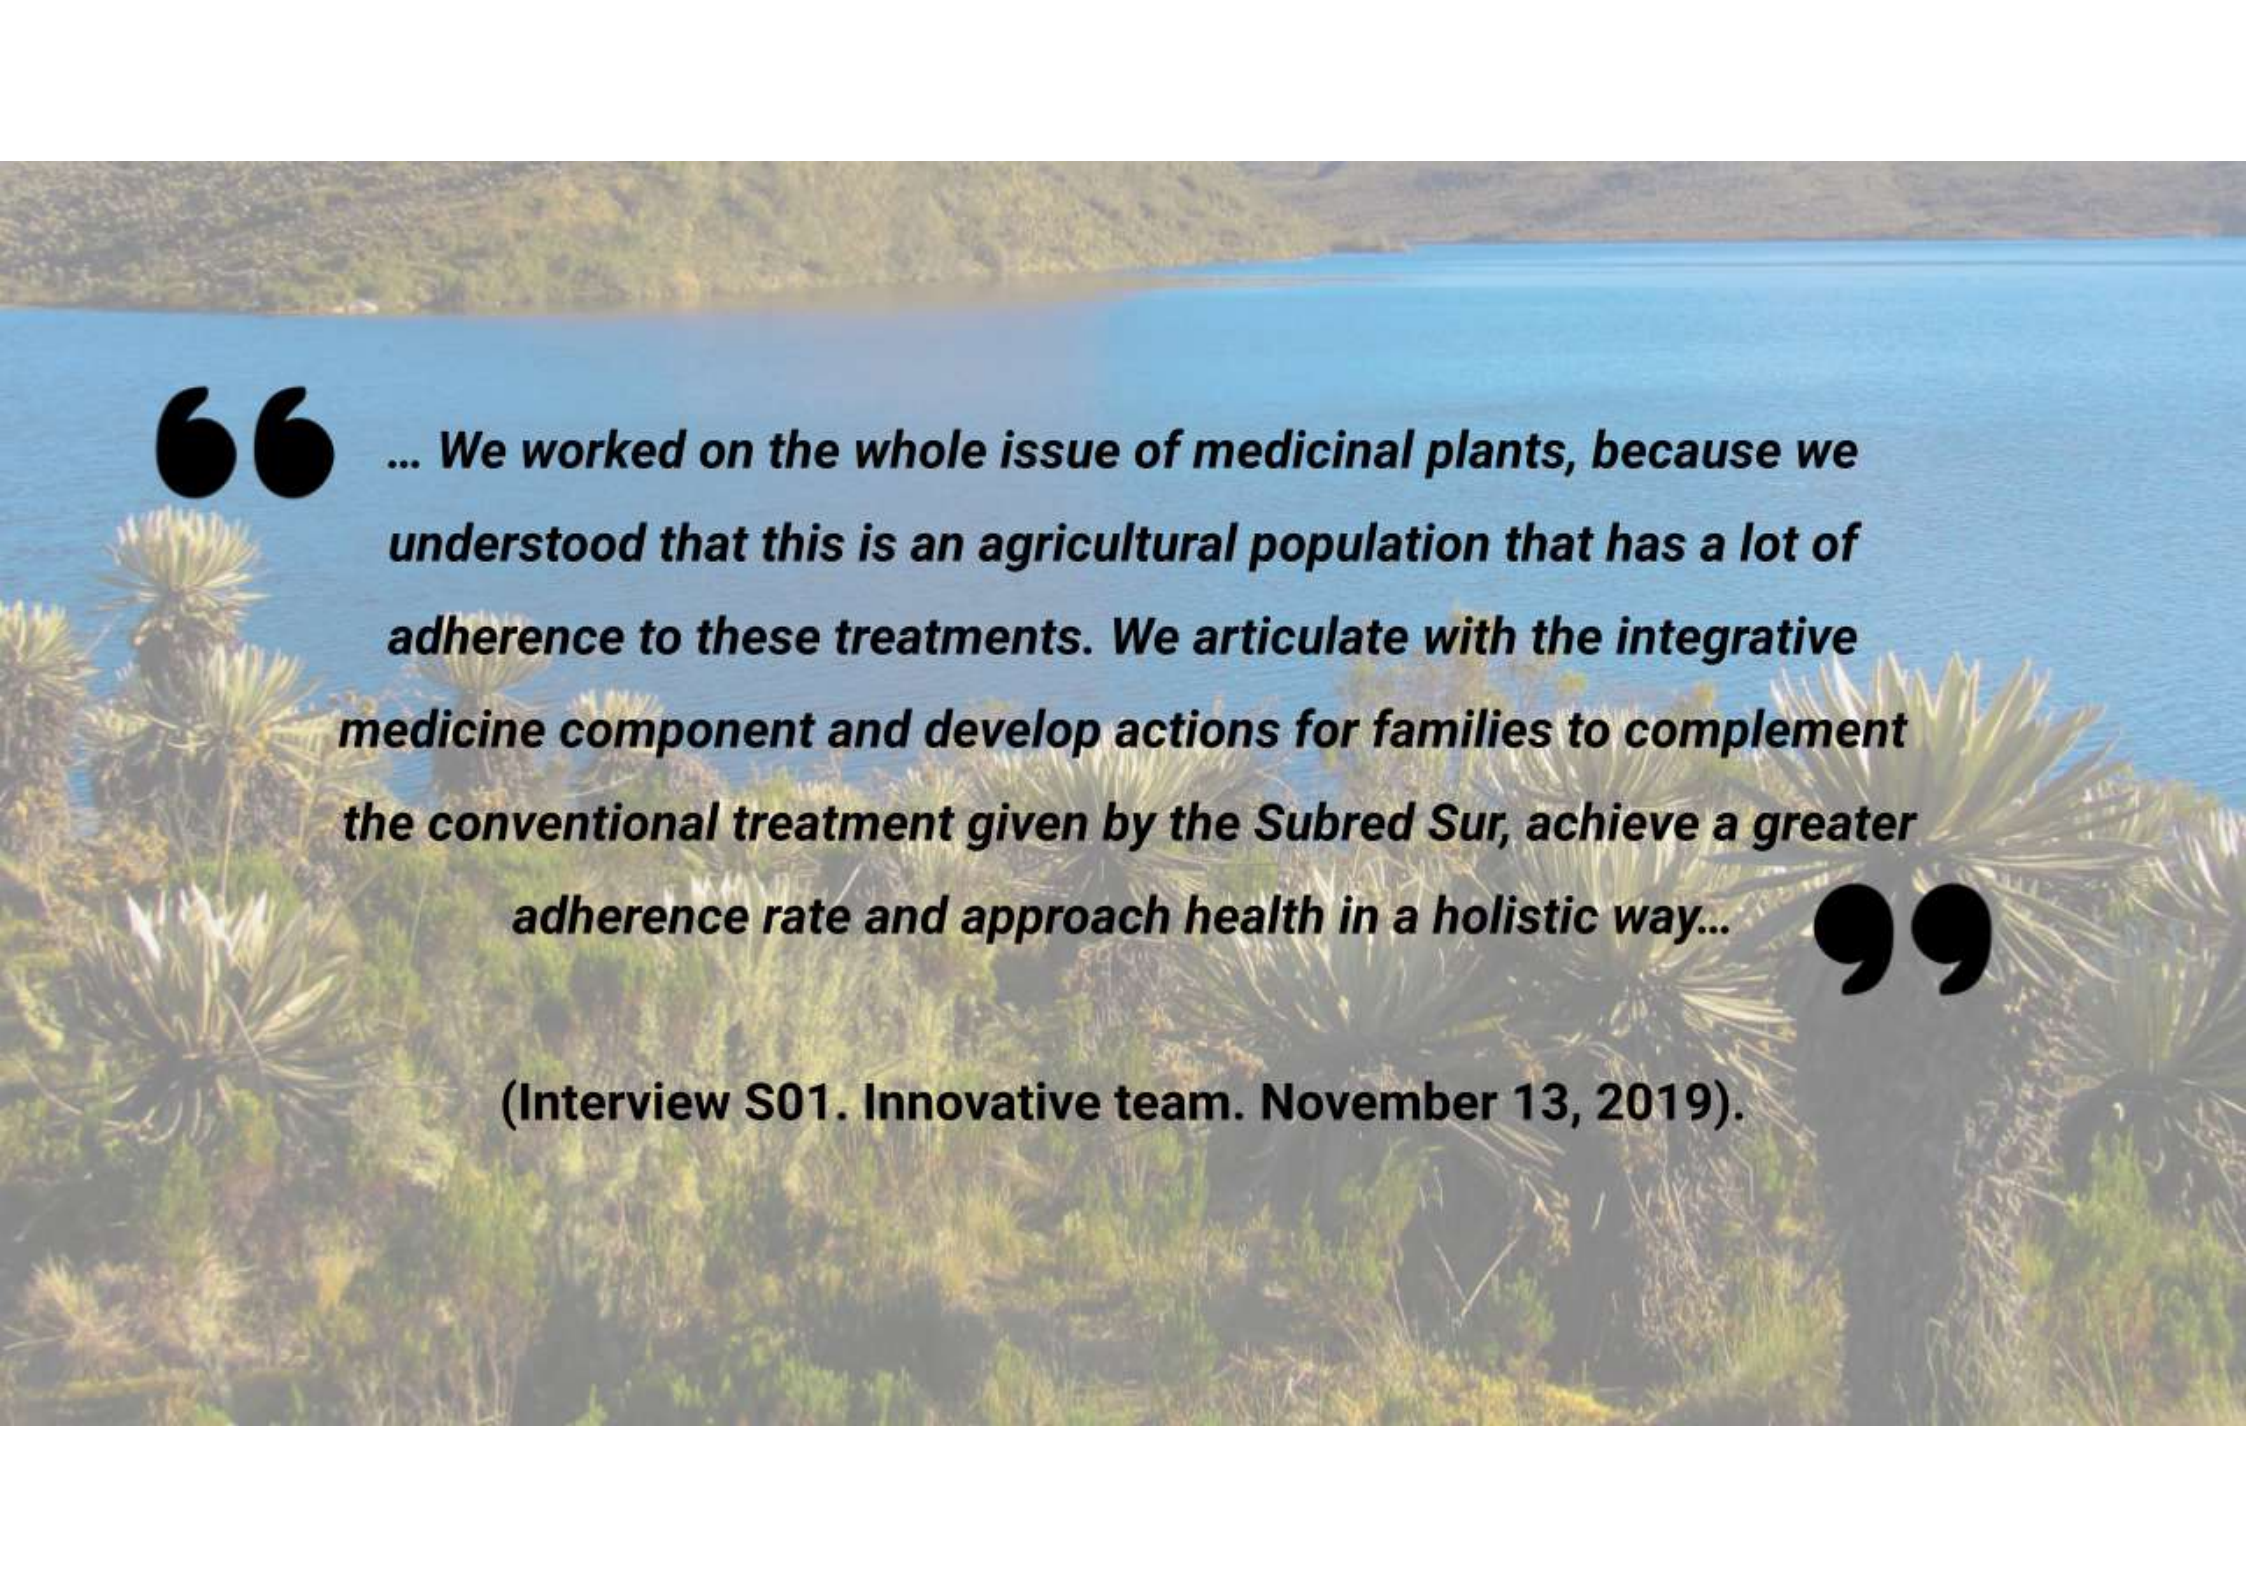

1.3. Food safety and natural medicine

'Let the food be the medicine and medicine be the food' (Hipócrates)

- Food Safety Program
- Integrative Medicine Program
- Ecotherapy Program
(2004-2016)

* *Chaquéén Park*

“ ... We worked on the whole issue of medicinal plants, because we understood that this is an agricultural population that has a lot of adherence to these treatments. We articulate with the integrative medicine component and develop actions for families to complement the conventional treatment given by the Subred Sur, achieve a greater adherence rate and approach health in a holistic way...”

(Interview S01. Innovative team. November 13, 2019).

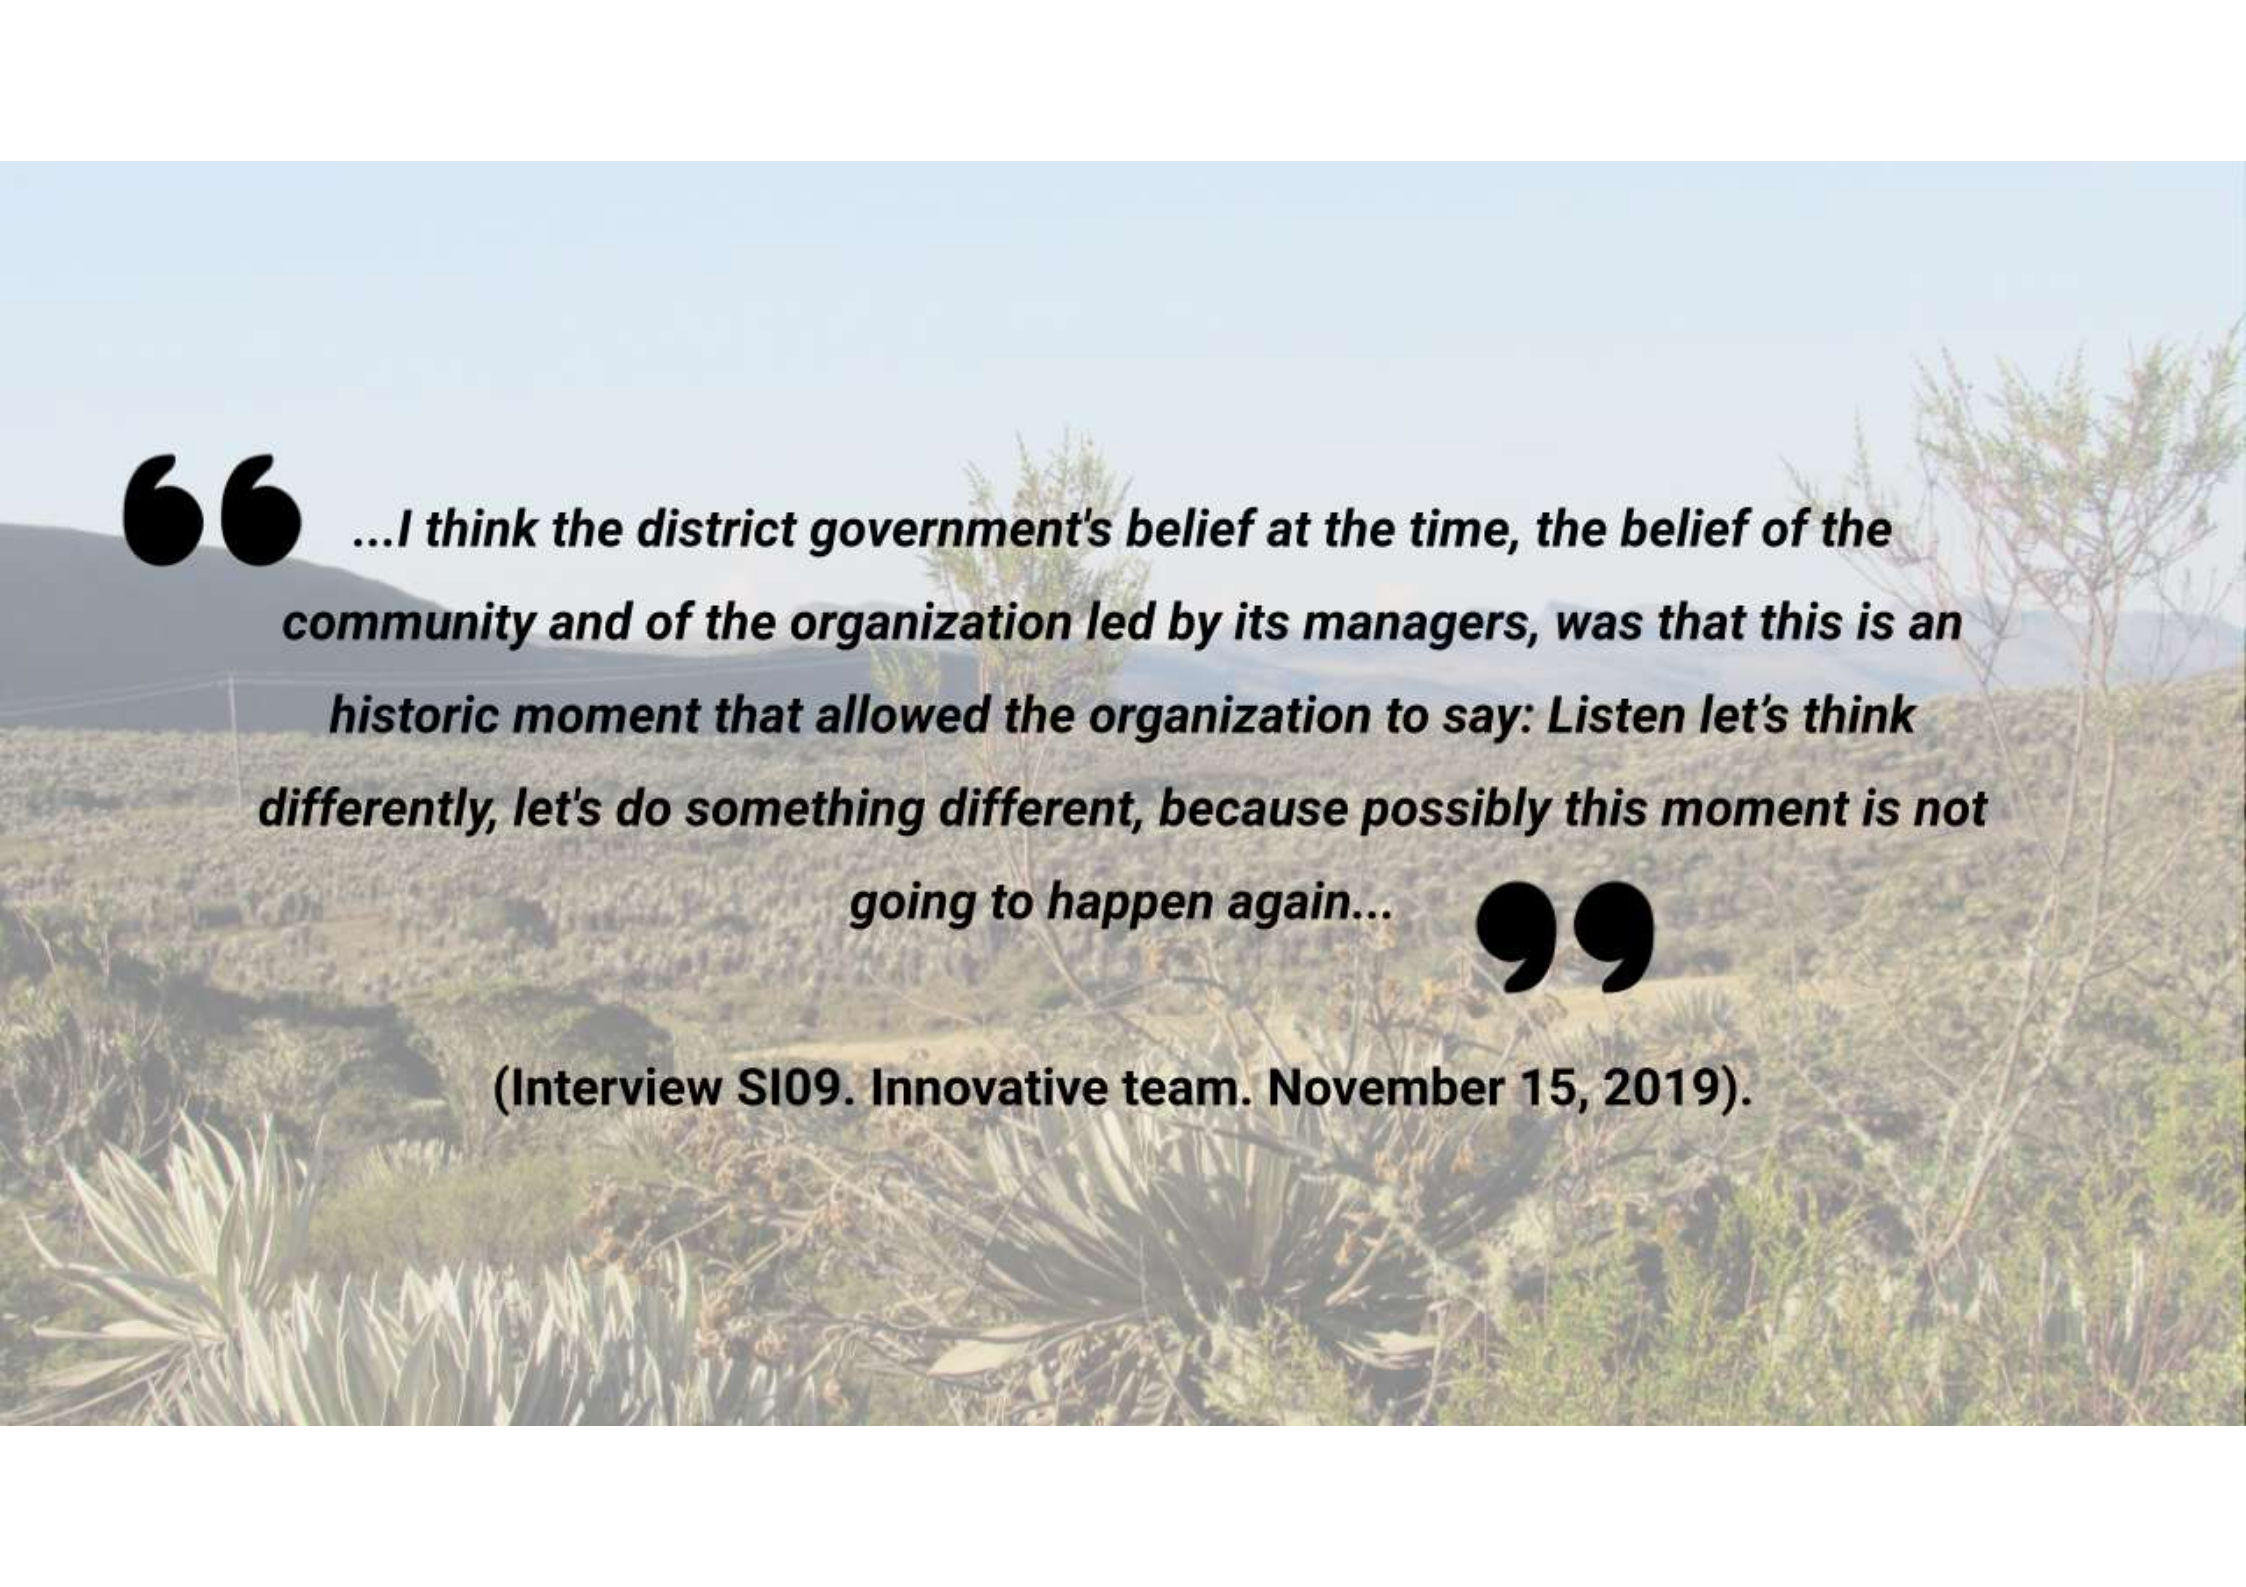

2. ORGANIZATION AND PEOPLE

2.1. Innovate organization

- Nazareth Hospital (2001-2015)
Subred Sur (2016 - present).
- It sought to “expand upon what was built”
- The model does not require a continuous manager
- Independent and neutral organization in the armed conflict

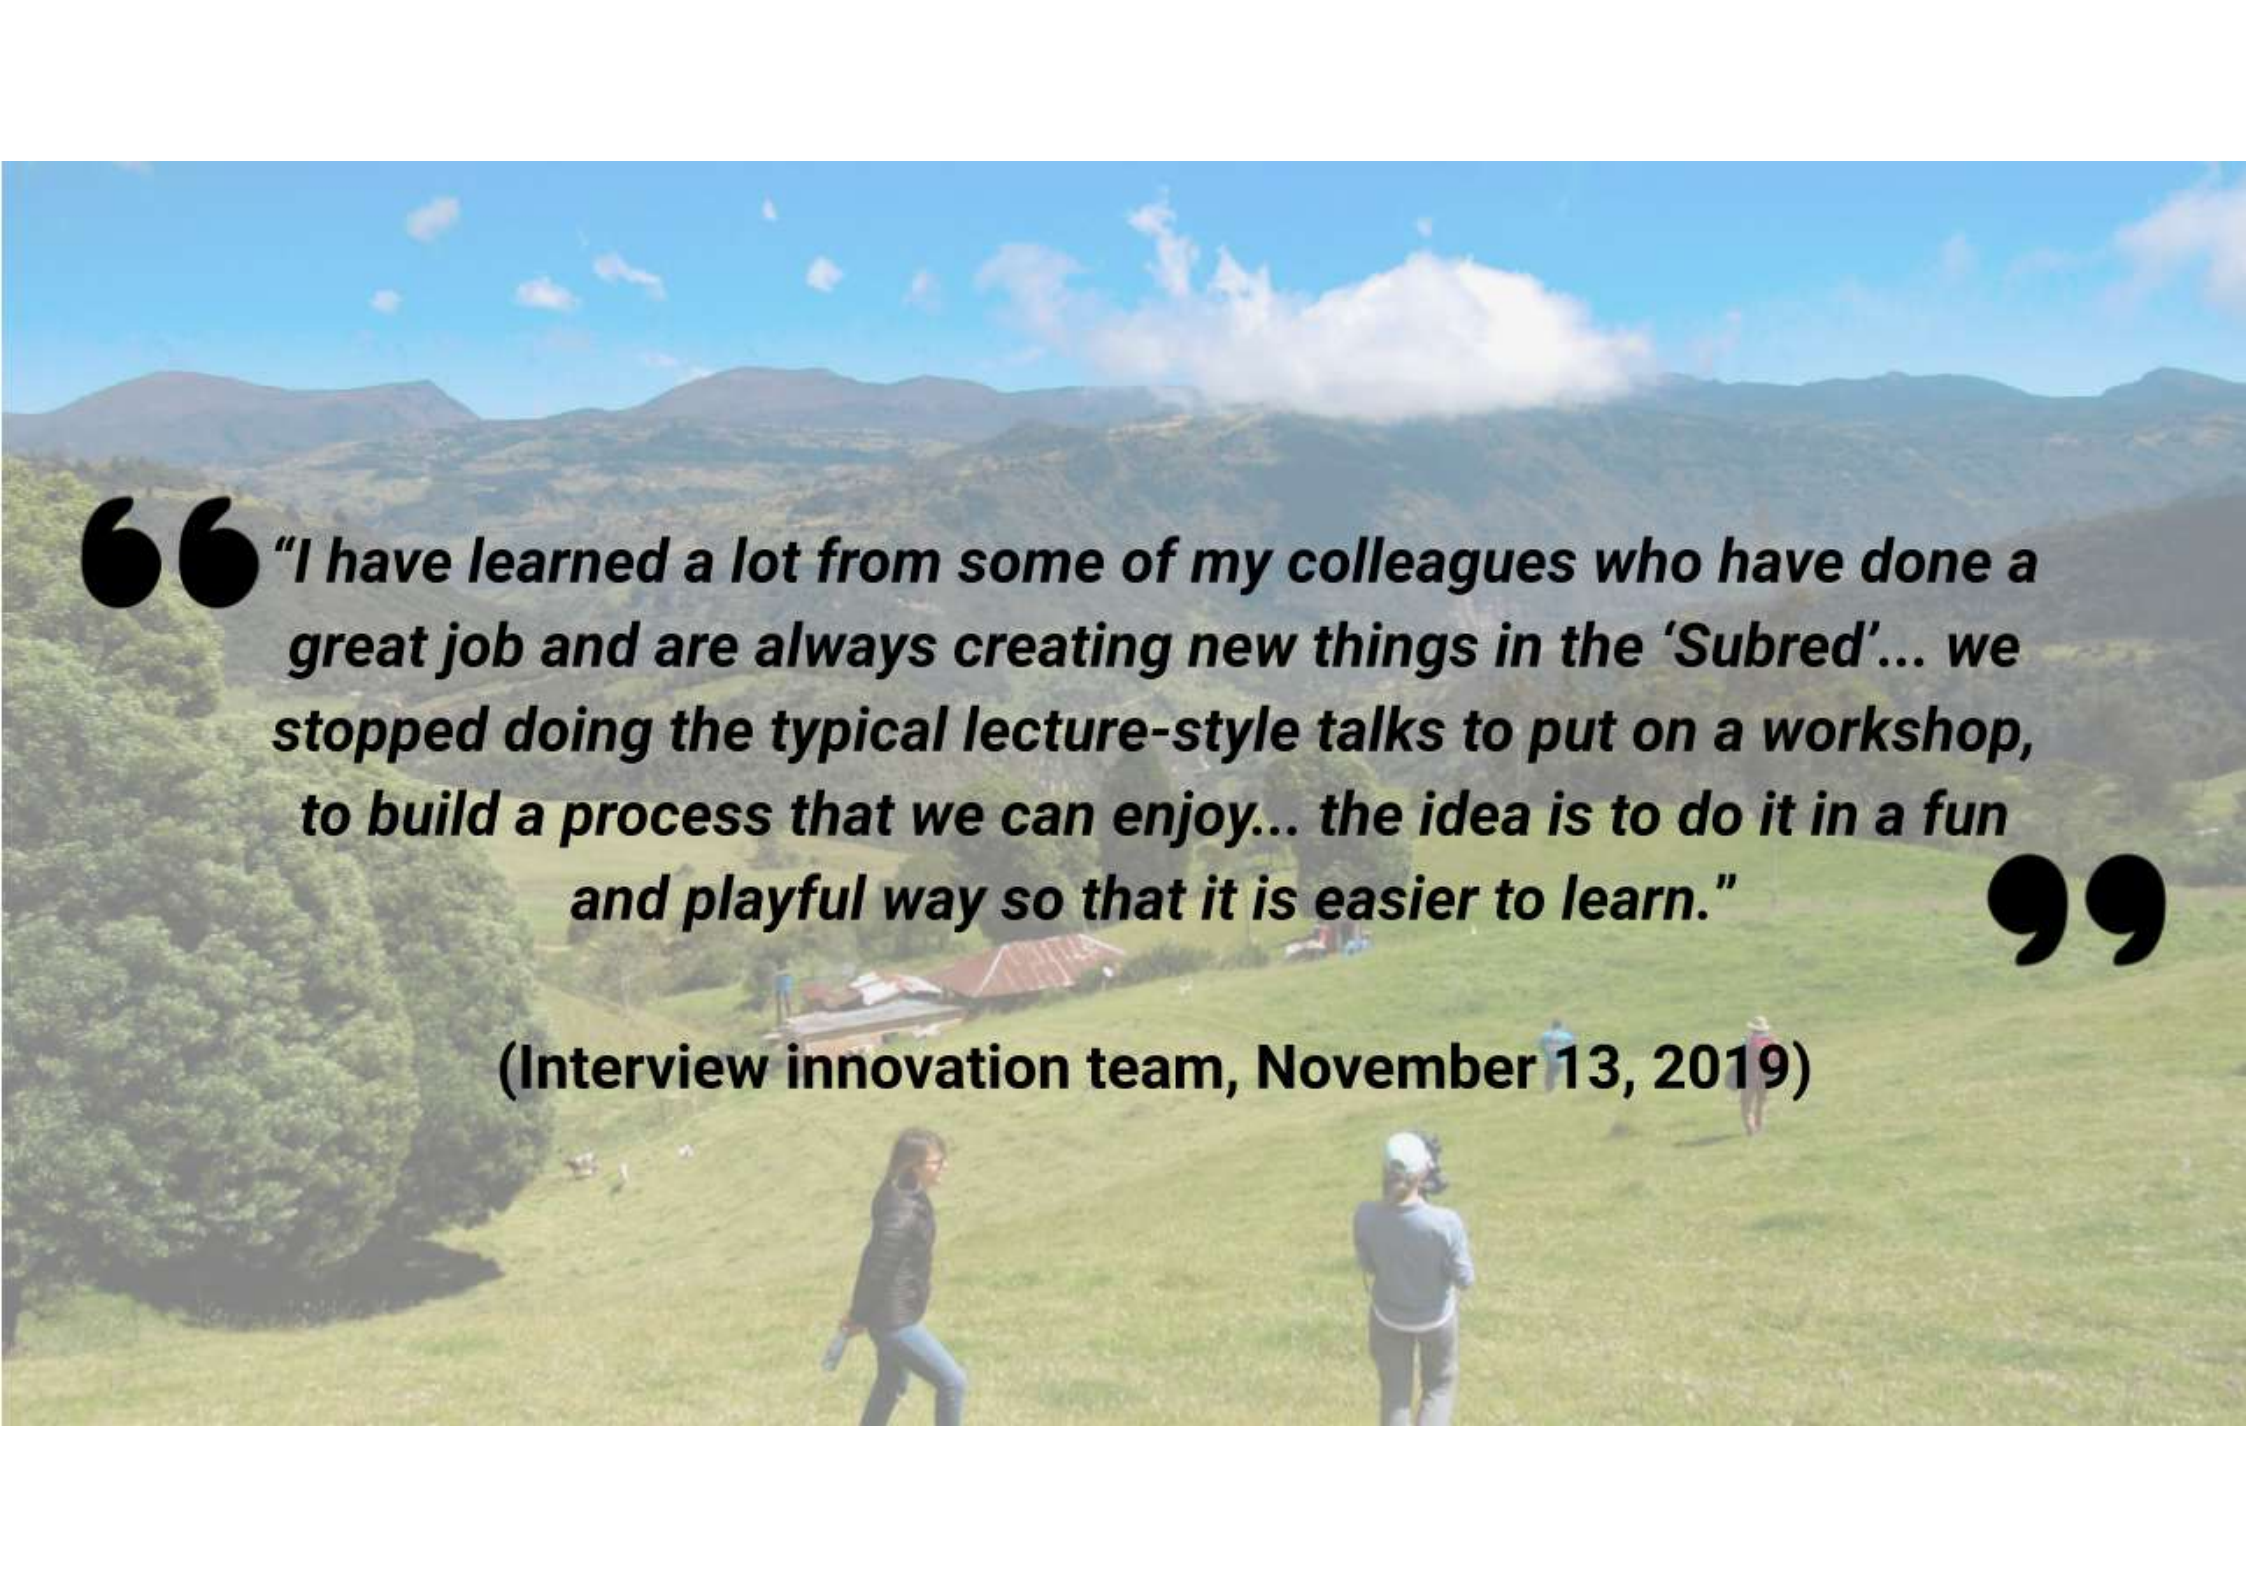

“ ...I think the district government's belief at the time, the belief of the community and of the organization led by its managers, was that this is an historic moment that allowed the organization to say: Listen let's think differently, let's do something different, because possibly this moment is not going to happen again... ”

(Interview SI09. Innovative team. November 15, 2019).

2.2. Implementation team

- "Young people eager for experience"
- Highly motivated and committed to community
- Continuous improvement: "quality circles"

“I have learned a lot from some of my colleagues who have done a great job and are always creating new things in the ‘Subred’... we stopped doing the typical lecture-style talks to put on a workshop, to build a process that we can enjoy... the idea is to do it in a fun and playful way so that it is easier to learn.”

(Interview innovation team, November 13, 2019)

3. RESULTS
